■ Profile

Undergraduate student at Jeonbuk National University majoring in Computer and Artificial Intelligence. Passionate about deep learning, computer vision, and recommender systems. Interested in becoming an AI engineer specializing in machine learning and intelligent data systems.

■ Projects

AI Character Generator (Cartoon Generator)	Deep learning-based face-to-cartoon transformation using U-Net and TensorFlow.
Cosmetics Recommendation System	Personalized cosmetic recommendations using Scikit-learn and Pandas.
Smart Content Recommendation Platform	Real-time content recommendation using LightFM and Flask API.

■ Skills

- Programming: Python, HTML/CSS, Git/GitHub
- Tools: TensorFlow, Scikit-learn, Pandas, Flask
- Languages: Korean (Native), English (Intermediate)

■ Career Interests

Aspiring Machine Learning Engineer focused on AI applications, data analysis, and computer vision. Interested in building intelligent systems that connect human creativity with data-driven insight.
